Courtney Bobsin is a research scientist and PhD Candidate in the School of Environmental and Forest Sciences at the University of Washington. She has worked with the UW’s Olympic Natural Resources Center since 2016. As a forest ecologist, she works on several long-term and large-scale research studies throughout the Pacific Northwest that test novel approaches to forest management. In addition, Courtney has worked with her colleagues to develop a process for equitable engagement with stakeholders and tribes that feed into management and research.
